

VENDstation

Stationary Ticket Vending Machine

The stationary ticket vending machine VENDstation offers a clearly structured menu on an easy-to-read 15" TFT display. The colorful touchscreen provides a clear presentation of various fares and can be easily read under all lighting conditions. Passengers benefit from the ability to navigate ticket purchases- even if they are not familiar with the local fare structure.

In accordance with ADA requirements, braille fonts, the adapted height of all user components and other features such as the high brightness TFT color display, loudspeaker, headphones collector and a button for audio activation make it much easier for people with reduced mobility or visual impairments to use the ticket vending machine.

According to their preference, passengers can pay for their tickets either by credit card, smart card or cash. Depending on the option selected, passengers receive their tickets on their smart card or printed as paper ticket or as virtual ticket (in case of ID-/account-based ticketing).
